DHM Research

COVID-19 Oregon Survey 2

Data Release 2 of 3

Crosstabs

dhm
**RESEARCH**

How to Read Crosstables: In the example chart (left), rows represent the three possible response options to the question *"All in all, do you think things are headed in the right direction, or are things pretty much on the wrong track?"* The three response options are: "right direction," "wrong track," and "don't know." The amounts in each response category sum to the amount in the "total" row at the top of the table.

The first column, or banner, is the "Total" column. It reflects the overall results.

The next two columns reflect the results of a subgroup, "Gender." The gender subgroup is composed of Males and Females, each with their own column. Both gender groups are assigned a letter (Male=B, Female=C).

These two columns show how males' attitudes compare to females' attitudes. As shown in the chart, 69% of the full sample thinks things are headed in the right direction. Looking at the gender subgroup, 71% of women think things are headed in the right direction, compared to 66% of men.

Statistically Significant Differences: If a pair of cells has a difference which is statistically significant, the larger of the two cells is flagged with the letter of the opposite column. The test shows the difference in females' attitudes about things being headed in the right direction is statistically significantly different than those of males', which is signified by a "B" (the letter given to Males) next to females' results for "right direction."

The footnote indicates the level of significance (sig=.05). This level of significance means that 5% of the time, the difference between how the two groups feel about the direction is due to random chance, while 95% of the time the difference is meaningful.

Statement of Limitations: Any sampling of opinions or attitudes is subject to a margin of error, which represents the difference between a sample of a given population and the total population. The margin of error is a statistic expressing the amount of random sampling error in a survey's results and differs by sample size, as reflected in the table below.

Margin of Error Based on Sample Size

N=1200	N=1000	N=800	N=600	N=500	N=400	N=300	N=200	N=150	N=100	N=50
+/- 2.8%	+/- 3.1%	+/- 3.5%	+/- 4.0%	+/- 4.4%	+/- 4.9%	+/- 5.7%	+/- 6.9%	+/- 8.0%	+/- 9.8%	+/- 13.8%

Q12. Would you support or oppose the State of Oregon reporting the number of people who have tested positive for COVID-19
