## How to Read Crosstabs

Q1. All in all, do you think things are headed in the right direction or are things pretty much on the wrong track?

		Gender		
		Male	Female	Subgroup results
<b>Total results</b> →		Total		
	Total	1371	722	
		100%	100%	
		(B)	(C)	
	Right direction	394	549B	← Significance test
		66%	71%	
<b>Responses</b> →	Wrong track	126C	100	
		21%	14%	
	Don't know	79	113	
		13%	15%	
		-----		
		(sig=.05) (all_pairs) columns tested BC		← Indicates level of significance

### How to Read Crosstables

In the example chart (left), rows represent the three possible response options to the question “All in all, do you think things are headed in the right direction, or are things pretty much on the wrong track?” The three response options are: “right direction,” “wrong track,” and “don’t know.” The amounts in each response category sum to the amount in the “total” row at the top of the table.

The first column, or banner, is the “Total” column. It reflects the overall results.

The next two columns reflect the results of a subgroup, “Gender.” The gender subgroup is composed of Males and Females, each with their own column. Both gender groups are assigned a letter (Male=B, Female=C).

These two columns show how males’ attitudes compare to females’ attitudes. As shown in the chart, 69% of the full sample thinks things are headed in the right direction. Looking at the gender subgroup, 71% of women think things are headed in the right direction, compared to 66% of men.

### Statistically Significant Differences

If a pair of cells has a difference which is statistically significant, the larger of the two cells is flagged with the letter of the opposite column. The test shows the difference in females’ attitudes about things being headed in the right direction is statistically significantly different than those of males’, which is signified by a “B” (the letter given to Males) next to females’ results for “right direction.”

The footnote indicates the level of significance ( $\text{sig}=.05$ ). This level of significance means that 5% of the time, the difference between how the two groups feel about the direction is due to random chance, while 95% of the time the difference is meaningful.

### Statement of Limitations

Any sampling of opinions or attitudes is subject to a margin of error, which represents the difference between a sample of a given population and the total population. The margin of error is a statistic expressing the amount of random sampling error in a survey's results and differs by sample size, as reflected in the table below.

### Margin of Error Based on Sample Size

<b>N=1200</b>	<b>N=1000</b>	<b>N=800</b>	<b>N=600</b>	<b>N=500</b>	<b>N=400</b>	<b>N=300</b>	<b>N=200</b>	<b>N=150</b>	<b>N=100</b>	<b>N=50</b>
+/- 2.8%	+/- 3.1%	+/- 3.5%	+/- 4.0%	+/- 4.4%	+/- 4.9%	+/- 5.7%	+/- 6.9%	+/- 8.0%	+/- 9.8%	+/- 13.8%

In 2024, there will be an election for Washington governor. While the final candidates for that election are not certain, we would like to ask about who you would vote for among the candidates who have announced they will run. The current governor, Jay Inslee, has indicated he will not seek reelection.

Q22. If the 2024 gubernatorial election were today, who would you vote for?

The U.S. Department of Housing and Urban Development (HUD) defines "affordable housing" as housing that accounts for no more than 30% (or about one-third) of a household's income. This suggestion includes basic utilities like water, heat, and electricity.

Q27. Using this calculation, is your housing situation "affordable?" Your best guess is okay.
