How to Read Crosstabs

Q1. All in all, do you think things are headed in the right direction or are things pretty much on the wrong track?

| | | Gender | | |
|--|-----------------|--------------|--------------|-------------|
| | | Total | Male | Female |
| | Total | 1371 100% | 1371 100% | 722 100% |
| | Right direction | 943 69% | 394 66% | 549B 71% |
| | Wrong track | 236 17% | 126C 21% | 100 14% |
| | Don't know | 192 14% | 79 13% | 113 15% |

How to Read Crosstables

In the example chart (left), rows represent the three possible response options to the question “All in all, do you think things are headed in the right direction, or are things pretty much on the wrong track?” The three response options are: “right direction,” “wrong track,” and “don’t know.” The amounts in each response category sum to the amount in the “total” row at the top of the table.

The first column, or banner, is the “Total” column. It reflects the overall results. The next two columns reflect the results of a subgroup, “Gender.” The gender subgroup is composed of Males and Females, each with their own column. Both gender groups are assigned a letter (Male=B, Female=C).

These two columns show how males’ attitudes compare to females’ attitudes. As shown in the chart, 69% of the full sample thinks things are headed in the right direction. Looking at the gender subgroup, 71% of women think things are headed in the right direction, compared to 66% of men.

Statistically Significant Differences

If a pair of cells has a difference which is statistically significant, the larger of the two cells is flagged with the letter of the opposite column. The test shows the difference in females’ attitudes about things being headed in the right direction is statistically significantly different than those of males’, which is signified by a “B” (the letter given to Males) next to females’ results for “right direction.” The footnote indicates the level of significance (sig=.05). This level of significance means that 5% of the time, the difference between how the two groups feel about the direction is due to random chance, while 95% of the time the difference is meaningful.

Statement of Limitations

Any sampling of opinions or attitudes is subject to a margin of error, which represents the difference between a sample of a given population and the total population. The margin of error is a statistic expressing the amount of random sampling error in a survey's results and differs by sample size, as reflected in the table below.

Margin of Error Based on Sample Size

| N=1200 | N=1000 | N=800 | N=600 | N=500 | N=400 | N=300 | N=200 | N=150 | N=100 | N=50 |
|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|-----------|
| +/- 2.8% | +/- 3.1% | +/- 3.5% | +/- 4.0% | +/- 4.4% | +/- 4.9% | +/- 5.7% | +/- 6.9% | +/- 8.0% | +/- 9.8% | +/- 13.8% |

Q2. Area of state

In recent years, the Washington State Legislature has explored new revenue options to help fund transportation projects as gas tax collections have not been enough to cover rising maintenance costs. One of the reasons gas tax collections have not kept up with funding needs is due to the rising costs of road maintenance and the increasing number of fuel-efficient and electric vehicles.

One policy discussed by legislators is a retail delivery fee. Generally, a retail delivery fee is a fee imposed on the delivery of retail items delivered by motor vehicles in the state. At least two other states have implemented a retail delivery fee to help pay for road maintenance.

Q61. Would you support or oppose the implementation of a retail delivery fee in Washington?

Another option being discussed to fund road maintenance in Washington is a road usage charge (RUC), which would charge drivers based on the number of miles they drive, instead of paying a gas tax based on how many gallons of gas they purchase.

Q62. Would you support or oppose the implementation of a road usage charge in Washington as an alternative to the gas tax?

Q67. Which is closer to your opinion?

1. We should develop AI technology as quickly as possible if it will help solve society's largest problems.

Or

2. AI should only be developed if the technology is fully understood.

Q70. Some AI technologies are able to have human-like conversations and develop human-like text (examples include ChatGPT, Bard AI, and ChatSonic). Other AI technologies can create art and music that are indistinguishable from human made art and music. Do you believe it is ethical for people or companies to use AI technologies that replace humans for financial gain?
