DHM Panel WA - Energy Questions

November 2025

DHM Panel WA

November 20-26, 2025; N=500

How to Read Crosstabs

Q1. All in all, do you think things are headed in the right direction or are things pretty much on the wrong track?

		Gender		Subgroup results
Total results		Man	Woman	
Total	1371 100%	1371 100%	722 100%	
		(B)	(C)	
Right direction	943 69%	394 66%	549B 71%	Significance test
Wrong track	236 17%	126C 21%	100 14%	
Don't know	192 14%	79 13%	113 15%	
				Indicates level of significance
				(sig=.05) (all_pairs) columns tested BC

How to Read Crosstabs

In the example chart (left), rows represent the three possible response options to the question "All in all, do you think things are headed in the right direction, or are things pretty much on the wrong track?" The three response options are: "right direction," "wrong track," and "don't know." The amounts in each response category sum to the amount in the "total" row at the top of the table.

The first column, or banner, is the "Total" column. It reflects the overall results. The next two columns reflect the results of a subgroup, "Gender." The gender subgroup is composed of Men and Women, each with their own column. Both gender groups are assigned a letter (Man=B, Woman=C). These two columns show how men's attitudes compare to women's attitudes. As shown in the chart, 69% of the full sample thinks things are headed in the right direction. Looking at the gender subgroup, 71% of women think things are headed in the right direction, compared to 66% of men.

Statistically Significant Differences

If a pair of cells has a difference which is statistically significant, the larger of the two cells is flagged with the letter of the opposite column. The test shows the difference in females' attitudes about things being headed in the right direction is statistically significantly different than those of males', which is signified by a "B" (the letter given to Males) next to females' results for "right direction." The footnote indicates the level of significance (sig=.05). This level of significance means that 5% of the time, the difference between how the two groups feel about the direction is due to random chance, while 95% of the time the difference is meaningful.

Statement of Limitations

Any sampling of opinions or attitudes is subject to a margin of error, which represents the difference between a sample of a given population and the total population. The margin of error is a statistic expressing the amount of random sampling error in a survey's results and differs by sample size, as reflected in the table below.

Margin of Error Based on Sample Size

N=1200	N=1000	N=800	N=600	N=500	N=400	N=300	N=200	N=150	N=100	N=50
+/- 2.8%	+/- 3.1%	+/- 3.5%	+/- 4.0%	+/- 4.4%	+/- 4.9%	+/- 5.7%	+/- 6.9%	+/- 8.0%	+/- 9.8%	+/- 13.8%

Data centers are specialized facilities where computers and IT equipment are used to process, store, and manage large amounts of data. These facilities are essential for running services like artificial intelligence and many online applications, such as streaming, internet searching, or social media use. Data centers require a large amount of electricity, both to power all the equipment and to keep the systems cool and prevent them from overheating.

Q36. Do you support or oppose the development of data centers in Washington state?

Washington's power grid is approaching its limit in providing electricity to homes across the state, particularly as demand for power increases. To help address this issue, lawmakers have created a team to explore ways to meet the increasing demand for electricity in Washington.

Q42. In your opinion, what should be the legislature's top priority to address Washington's increasing electricity demand?

Small modular nuclear power reactors, or SMRs, are designed with modular technology using standardized factory fabrication, making them easier to design, build, and operate than traditional large-scale nuclear power plants. SMRs are typically about one-tenth the size of traditional large-scale nuclear power reactors. SMRs can generate up to 300 megawatts of electricity, equivalent to the power used by 150,000 homes for one year.

Q45. Knowing this, do you support or oppose the use of small modular nuclear reactors in Washington?

Small modular nuclear power reactors, or SMRs, are designed with modular technology using standardized factory fabrication, making them easier to design, build, and operate than traditional large-scale nuclear power plants. SMRs are typically about one-tenth the size of traditional large-scale nuclear power reactors. SMRs can generate up to 300 megawatts of electricity, equivalent to the power used by 150,000 homes for one year.

Q45. Knowing this, do you support or oppose the use of small modular nuclear reactors in Washington?
